

**digital product experiences built to
improve usability, create
consistency, and support growth**

many digital products lose trust
and create friction because the
experience does not feel clear,
consistent, or easy to use

what that looks like

- The product feels hard to navigate or harder to use than it should.
- Users do not move through key workflows with enough clarity or confidence.
- The experience feels harder to scale because design and frontend decisions are not working from the same system.

Kurocado Studio helps teams design and build product experiences that feel clearer, more usable, and more consistent across the surfaces users rely on

product development

SpotOn

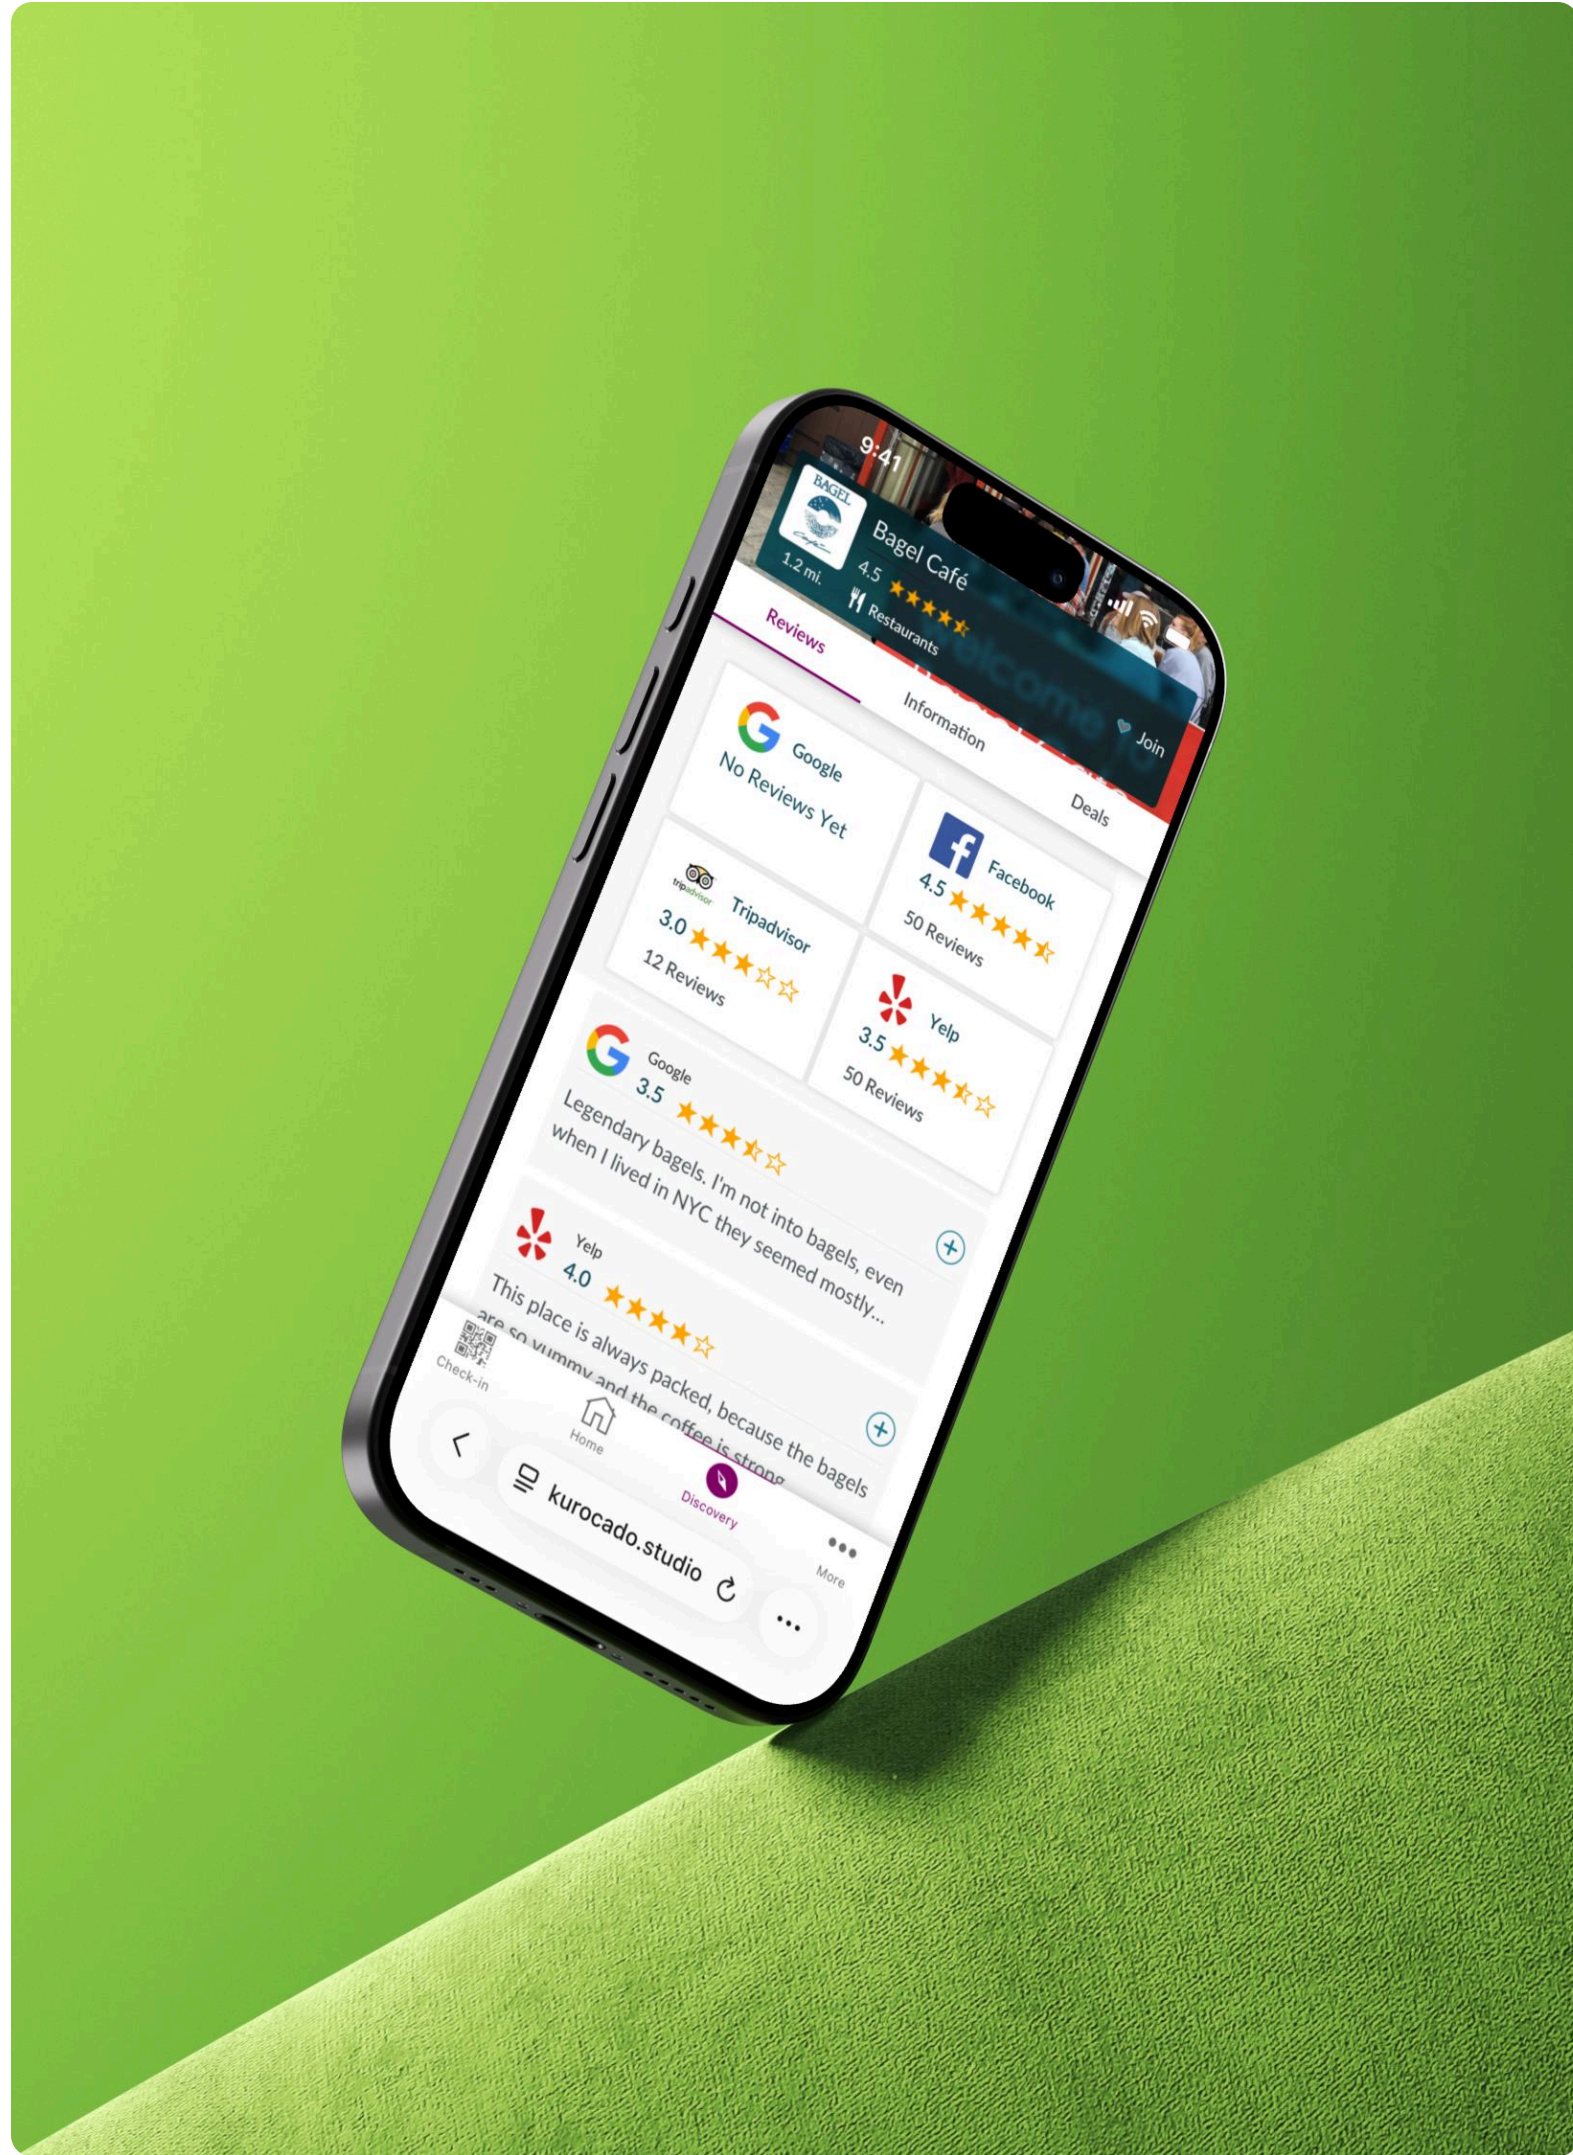

A 0-1 cross-platform design system built to support SpotOn's shift into payments, spanning client- and merchant-facing web, mobile, and marketing surfaces.

(03) MacBook/Desktop

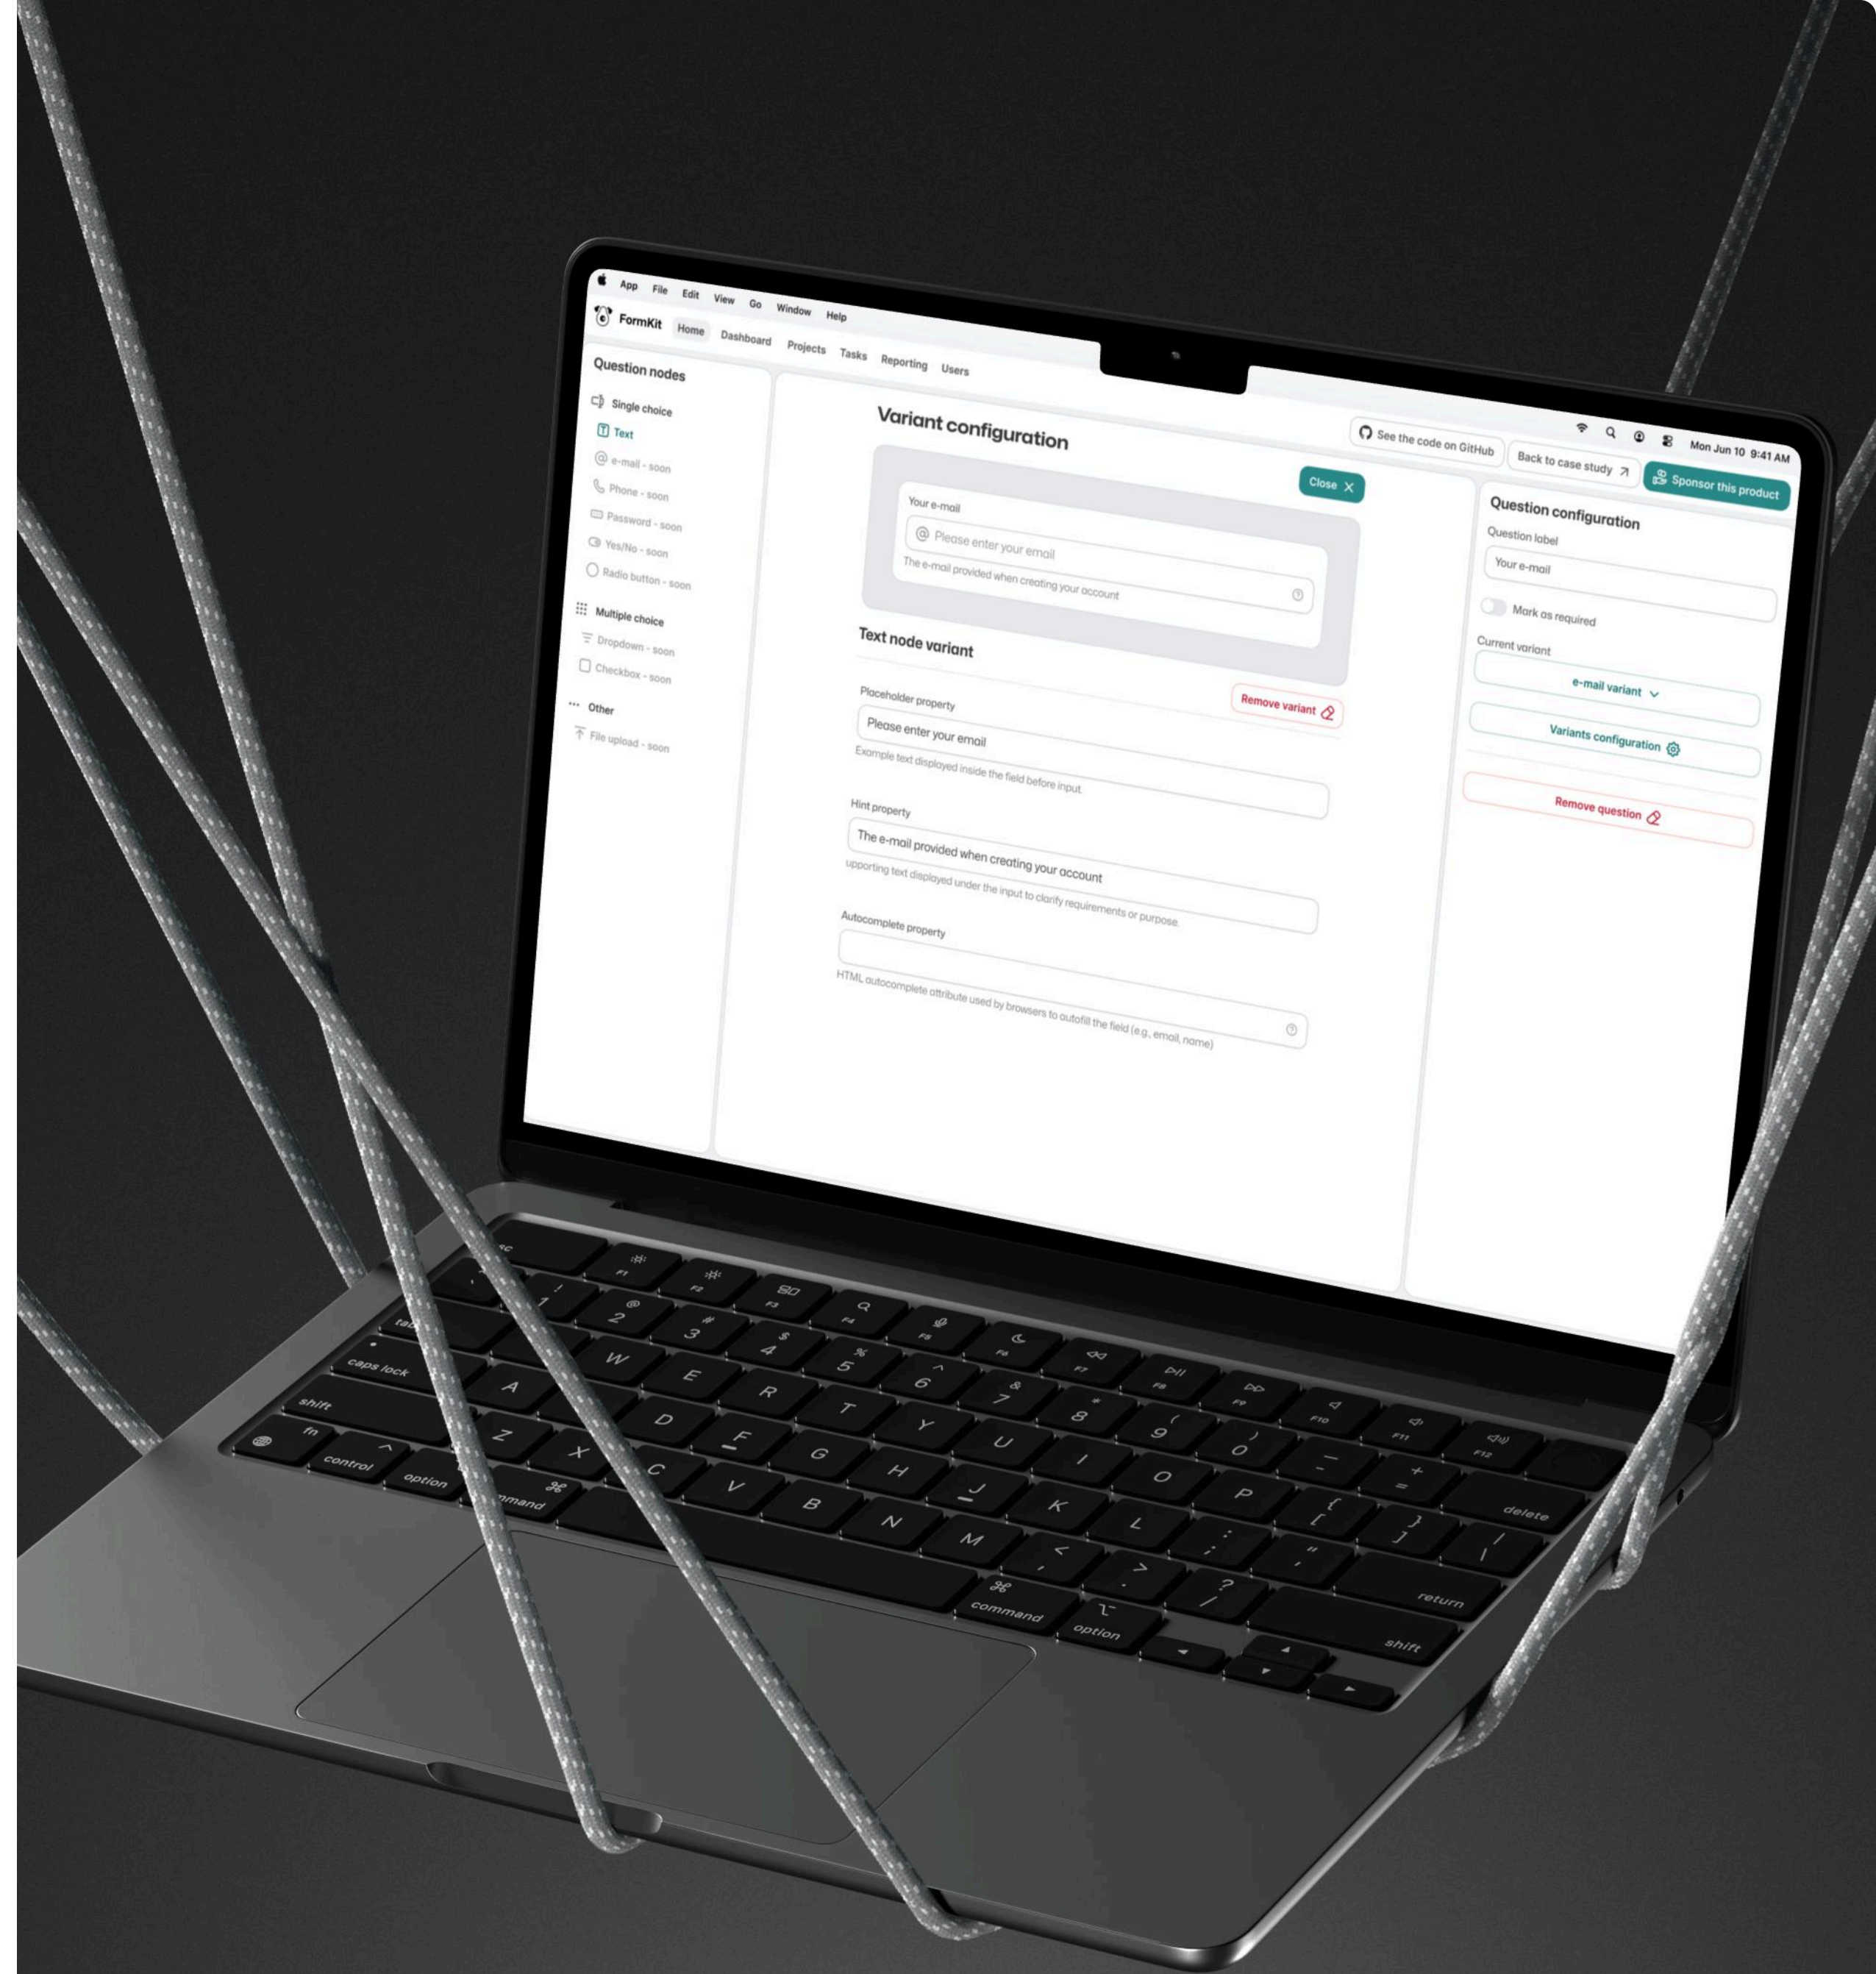

product development

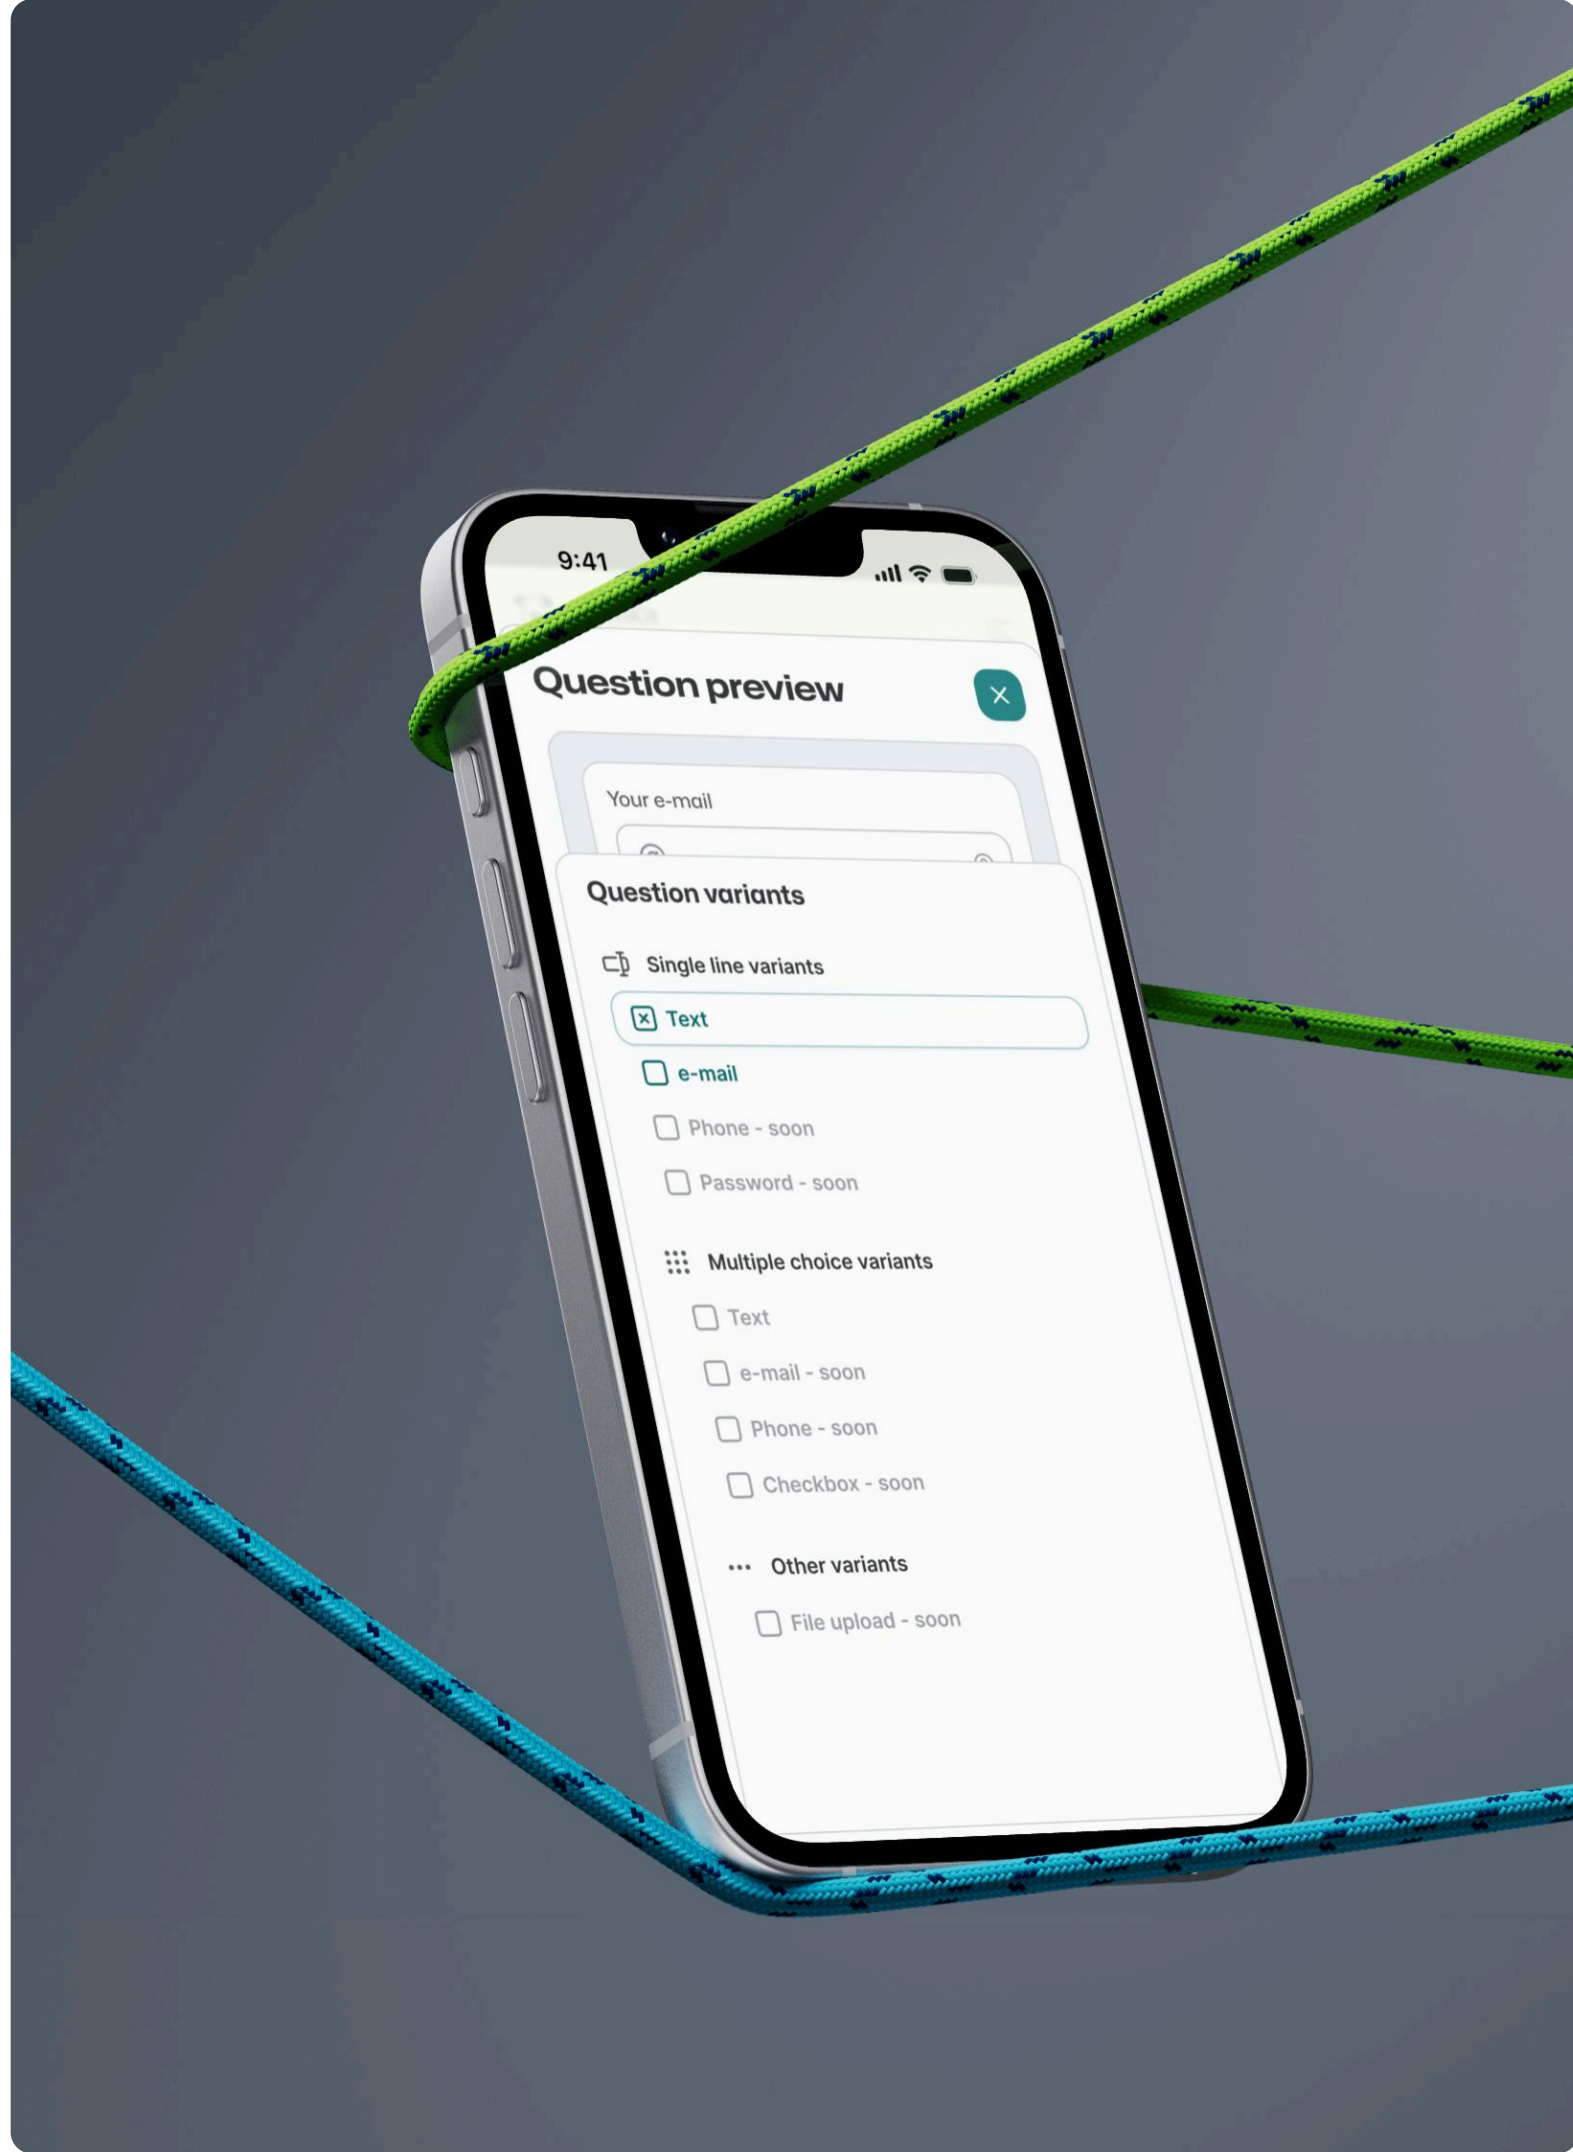

Formkit

A flagship internal product built to explore schema-driven form architecture, reusable runtime patterns, and design-system-aligned UI at scale.

what clients get

- A product experience that feels more intentional and easier to use.
- A stronger foundation for future product growth.
- More consistent interface decisions.
- Clearer user flows.

what makes our approach different

We do not treat product design and frontend implementation as separate tracks.

We treat them as parts of the same system, so the experience is easier to use, easier to maintain, and easier to scale.

let's make your
product easier to use
and easier to scale
